EDUCATION

Shri Shambhubhai V. Patel College of CS & BM
Bachelor of Computer Application
CGPA: 7.01

Surat, Gujarat
July 2022 – April 2025

CMPICA, CHARUSAT
Master of Science in Information Technology (Pursuing)

Anand, Gujarat
August 2025 – May 2027

SKILLS

- **Programming Languages:** Java, Python, C++, JavaScript, C
- **Frameworks / Libraries:** Spring Boot, React.js, Node.js, Express.js, PHP, Flutter, LangChain
- **Databases:** MySQL, MongoDB, PostgreSQL, Firebase
- **AI / LLM:** OpenAI API, Claude API, Prompt Engineering, RAG, Vector DBs (ChromaDB, Pinecone)
- **Tools:** Git, GitHub, Postman, VS Code, IntelliJ IDEA, AWS (Basic)
- **Platforms:** Jupyter Notebook, Android Studio
- **Core Concepts:** Object-Oriented Programming, Data Structures, REST APIs, Machine Learning Basics
- **Soft Skills:** Communication, Teamwork, Problem Solving, Time Management

PROJECTS

AI-Powered Job Application Tracker [GitHub]

Node.js, Express.js, MongoDB, React.js, JWT, OpenAI API, REST APIs

- Built a full-stack job tracking platform where users can log, update, and monitor job applications with status pipelines (Applied → Interview → Offer).
- Integrated OpenAI API to analyze pasted job descriptions and auto-suggest resume improvements and skill gaps using prompt-engineered LLM workflows.
- Implemented secure JWT-based authentication, protected routes, and user session management.
- Designed RESTful APIs with Node.js + Express.js and a React.js dashboard with dynamic data rendering and real-time status updates.
- Used MongoDB for efficient document storage of job entries, user profiles, and AI-generated insights.
- Implemented Node.js cron jobs to send email reminders for follow-ups and upcoming interview deadlines.

RAG-Based Document Q&A Bot [GitHub]

Python, FastAPI, LangChain, OpenAI API, ChromaDB (Vector DB), React.js

- Built an AI-powered backend system allowing users to upload PDF/text documents and ask natural language questions about their content.
- Implemented Retrieval-Augmented Generation (RAG) pipeline using LangChain: document chunking, embedding generation, and vector storage in ChromaDB.
- Designed optimized prompt templates for context-aware question answering, ensuring accurate and hallucination-reduced responses from the LLM.
- Exposed the RAG pipeline as a FastAPI REST endpoint, consumed by a React.js frontend for a clean chat-style interface.
- Supported multi-document sessions with isolated vector namespaces per user, enabling concurrent Q&A without context leakage.
- Demonstrated working knowledge of Vector DBs, embedding models, and production-grade AI workflow design.

Human Resource Management System (HRMS) [GitHub-Backend] — [GitHub-Frontend]

Java, Spring Boot, ReactJS, PostgreSQL, JWT

- Developed a full-stack Human Resource Management System with multi-role access (Admin, HR, Manager, Employee) using Role-Based Access Control (RBAC).
- Implemented secure authentication and authorization using JWT, protected routes, and session management.
- Built RESTful APIs using Spring Boot and developed core modules for employee CRUD operations, leave management, and hierarchical approval workflows.
- Designed responsive role-based dashboards with dynamic data rendering and real-time insights using ReactJS.
- Integrated PostgreSQL database using Spring Data JPA for efficient data storage and retrieval.
- Connected frontend and backend using Axios with structured API services and robust error handling.

- Managed global application state using React Context API for authentication and theming.
- Structured backend using layered architecture (Controller, Service, Repository, DTO) for scalability and maintainability.
- Tested and validated all REST APIs using Postman to ensure functionality, security, and reliability.

SmartShelf (Android Application)

Java, XML, Android Studio, Firebase

- Developed an Android application to help users manage and organize household or personal items stored on shelves.
- Implemented features to add, update, remove, and search items stored on different shelves.
- Designed and implemented a shopping list module where users can create and manage lists of items that need to be purchased.
- Added functionality to assign expiry dates to items and notify users about items that are close to expiration.
- Implemented item categorization (e.g., groceries, electronics, household items) to better organize stored products.
- Integrated Firebase database for efficient local storage and retrieval of item data and shopping lists.
- Designed a user-friendly mobile interface using Android UI components to provide smooth navigation and easy item management.

EXTRA CURRICULAR & CERTIFICATES

JPMorgan Software Engineering Job Simulation

August 2025

- Used Perspective data visualization software and Python to monitor stock price trends & create trading strategies.

Deloitte Australia Technology Job Simulation on Forage

October 2025

- Completed a job simulation involving development and coding.
- Wrote a proposal for creating a dashboard.
